### 1.1.1 Subpackages

##### Submodules

**exception** smoke\_forcing.utils.conf\_tools.InvalidConfigException

Bases: Exception

smoke\_forcing.utils.conf\_tools.check\_config (*func*)

Wrapper function that checks whether the *config* parameter passed to the function wrapped is:

- 1) A *dict*
- 2) *str* or *Path*. In this case, it will check if the path is a directory, and if it exists. If the config can be opened, it is loaded into a *dict*, and fed to the function wrapped in place of the *str* or *Path*
- 1) The function wrapped must have *config* as a positional argument. The position of the parameter itself is of no consequence.

**Parameters** *func* – python function to be wrapped

**Returns** whatever the wrapped function returns
